STUDENT INFORMATION SYSTEM

TEAM MEMBERS:

- **Shrinisha N (148)**

- **Sriprabha AR (167)**

- **Suba Shree V S (171)**

AIM:

To develop a software to manage student information using Java, SQL and NetBeans.

PROBLEM STATEMENT:

The objective of the Student Information System is to allow the administration of any organization to edit and view details of a student and allow the student to keep up to date his profile. There are portals for administrators and students. The student must register by entering the name and password to login the form and students can view and modify their details. The admin can search for a particular student to view their details and also add or remove a student.

Main objectives of the Student Information System:

STUDENT	ADMINISTRATOR
➔ Registering with details ➔ Login with credentials ➔ View their details ➔ Edit their details	➔ Login with credentials ➔ Search for a student and view their details ➔ Add a student ➔ Edit student details ➔ Remove a student

Overall, the Student Information System will make it an easier job for the administrators as well as the students in maintaining and managing the student's records.
